8.2	<b>Exposure controls</b> <b>Appropriate engineering controls</b> Do not eat, drink or smoke at the work place. Follow the usual good standards of occupational hygiene and dental practise. Ensure adequate ventilation of work place. Store work clothing separately. Remove contaminated or soaked clothing immediately. <b>Individual protection measures, such as personal protective equipment</b> <u>Eye/face protection</u> Wear tightly sealed goggles.  <u>Skin protection</u> Wear suitable protective gloves.  Material of gloves: Butyl rubber; EN 374 Suitability of gloves should be confirmed with glove manufacturer. Change gloves, if contamination occurs or duration of activity exceed break through time. Breakthrough time of the glove material: refer to the information provided by the glove's producer. Commercial medical gloves do not provide protection against the sensitizing effect of methacrylates. <u>Respiratory protection</u> In the case of short term exposure use suitable mask with filter type A. In the event of particularly high levels of vapours a self contained breathing apparatus is appropriate. <u>Thermal hazards</u> None. <b>Environmental exposure controls</b> Ensure effective control measures when working within the boundaries as specified in section 6.2.

**11. TOXICOLOGICAL INFORMATION**

**11.1 Information on toxicological effects**

**Acute toxicity**

Ingestion

Low oral toxicity, but ingestion may cause irritation of the gastrointestinal tract.

LD/LC50 values relevant for classification:

80-62-6 methyl methacrylate: LD50 (oral)=7872 mg/kg (rat)

Inhalation: May cause respiratory irritation. May cause drowsiness or dizziness.

Inhalation toxicity data: LC50 (vapour) 7093 ppm (29,8 mg/l)(4hr)

**Skin irritation**

May cause an allergic skin reaction. Causes skin irritation. Repeated and/or prolonged contact may cause dermatitis.

**Eye contact**

High vapour concentration will cause irritation.

**Sensitization**

Sensitization possible through skin contact. Not a respiratory sensitizer.

**CMR effects**

Carcinogenicity

No evidence of carcinogenicity.

Mutagenicity

Germ cell mutagenicity data: negative.

Toxicity for reproduction

Teratogenic and fetotoxic effects only observed in presevce of maternal toxicity.

**Repeated dose toxicity**

Chronic exposure

Repeated exposure to high levels produces adverse effects on the heart, lungs, liver and kidneys.

Repeated exposure of animals by inhalation to levels at or above the occupational exposure level

produces adverse effects on the nasal epithelium (levels of 100 and 400 ppm).  
There is no reason to believe that methyl methacrylate represents a carcinogenic or mutagenic hazard to man based upon evidence from well conducted animal studies, relevant mutagenicity studies and adequate epidemiology studies in relevant cohorts.

Recent studies in animals have shown that high exposures do not produce embryo or foetotoxic nor teratogenic effects in the presence of maternal toxicity.
